

ASSIGNMENT BRIEF

Module title	Project
Module code	COM646
Module leader	Bindu Jose
Assessment title	Project Documentation and Artefact Demonstration
Launch date	02 nd October 2025
Submission deadline	Project Proposal – Monday 3 rd November 2025 Project Specification – Monday 24 th November 2025 Posters Presentation – Thursday 11 th December 2025 Literature Review – Monday 23 rd February 2026 Project Report – Monday 27 th April 2026 Project Demonstration – Wednesday 6 th May 2026
Expected date for return of marks and feedback	Grades and feedback will be available on Moodle within 15 working days. This will consist of annotations on submission, and face to face dialogue if and when required.
Module outcomes assessed	1. Critically analyse contemporary trends in the wider digital research and industries to determine a project specification. 2. Appraise and assess the use of appropriate development methodologies in relation to a graduate-level project. 3. Analyse, design and develop a solution to a relevant contemporary industry problem. 4. Critically analyse production data to assess milestone progress and digital project management effectiveness throughout the lifecycle of an active project. 5. Evaluate project against the project specification and relate it to contemporary professional, legal, ethical and social issues.
Assessment weighting	100% (see marking criterial on Moodle)
Word count	Report between 12,000 and 25,000

Assessment task details

You are required to research and implement a personal project that demonstrates your ability to carry out a substantial programme of work to an agreed specification, within a set timeframe.

The project must be related to your degree programme. The overall purpose of the project is to provide students with moderately scaled industry project simulation opportunities that provide a platform for career preparation.

The project will involve:

1. The construction or production of an artefact, a digital technology-based minimum viable product (MVP), like those created in the industry, which is developed in the context of current research, as determined through the literature survey and the requirements of the intended users.
2. The writing of a project report describing the field of study, the project objectives, the literature review, the methodology adopted, the investigation, analysis, design and implementation of the project artefact (as appropriate). It must contain a critical evaluation of both the artefact and the (your) execution of the project. The terms of reference for the project, its aims, objectives and final deliverables must be agreed between you, your personal project supervisor, and be accepted by the Project Approval Panel.

Generative Artificial Intelligence (GenAI) Guidance

You can use GenAI to brainstorm ideas as this could help you to explore a wider range of possibilities before selecting the most appropriate project.

The work of designing and constructing the artefact must be your own work. Relying on AI to generate the artefact would diminish your role in the creative process, which is a key component of this assessment.

The core purpose of a literature review is not just to summarise existing research, but to critically analyse and interpret it. This involves evaluating the quality of the research, identifying biases, and drawing connections between different pieces of research. This requires your own critical engagement and should not be outsourced to AI. Using GenAI to generate critical analysis would undermine the authenticity of your understanding.

The choice of methodology, the reasoning behind design decisions, and the implementation of the project artefact must be based on your own understanding

and skills. Using generative AI to automate these decisions would not accurately reflect your ability to independently plan and execute a project. This expectation applies equally to all other sections of your report as well.

The report requires a critical evaluation of both the artefact and your execution of the project. This personal reflection and critical analysis must be conducted without AI assistance. Using GenAI to generate this content would undermine the authenticity of your own insights and reflections on your project.

Guidance as to how GenAI use might be permitted is available on the [Learning and Teaching Hub](#)

Submission instructions

Format and structure of the report: It should be submitted as a single MS Word (.doc/.docx) or PDF document only, containing your full report, a reference list, and appendices. This report should be written using the correct grammar and referencing skills (IEEE style); it must be formatted appropriately in a standard, accessible format; and include all appropriate sections as seen in the template which is provided on Moodle.

Referencing for all written material should follow the IEEE standard, with particular attention paid to referencing of material resourced from the Web or other online facilities. References do not count towards the word count.

Submission of the report: It must be submitted online via the appropriate Turnitin submission link found on the module space before 23:59 on the due date. (Emailed or paper versions will not be accepted).

Demonstration of the artefact: The demonstration of the artefact will showcase the functionality, design, and impact of your artefact, providing an opportunity to highlight key features and answer any questions.

Proposal:

- Project Proposal - Monday 3 November 2025
- Project Specification - Monday 24 November 2025

Mid-Review:

- Posters Presentation - Thursday 11 December 2025
- Literature Review - Monday 23 February 2026

Final Submission:

- Project Report - Monday 27 April 2026
- Project Demonstration – Wednesday 6 May 2026

Hints and tips

The project is a feature of all computing degree courses, and it should be viewed as an opportunity to synthesise the knowledge and skills acquired in other modules.

“Projects are a major component of virtually all undergraduate and postgraduate computing and information systems courses within universities. They require students to draw on a number of separate but highly important skills: surveying literature, report writing, documenting software, presentation skills, time management, project management skills and so on. For students to excel in all of these areas is a major accomplishment, yet it is something that academic institutions have come to expect as part of the independent learning process” [1].

The artefact refers to a tangible outcome or product that is created during the development process. This can take various forms depending on the nature and objectives of the project. The artefact is typically developed based on research, design, and implementation efforts, and it serves as the main deliverable of the project.

You are advised to select a project that allows you to integrate and apply the knowledge and skills you have gained from other modules, while also providing opportunities to expand your expertise and showcase your proficiency. Choose a project that aligns with your degree programme, abilities and interests, as you will be dedicating a significant amount of time to it. Ensure that your project is of appropriate scope, meeting all the criteria expected for an Honours degree project. Additionally, make sure that all necessary resources are readily available for the successful completion of your project.

Remember your choice of project can influence your chosen career path.

It is your responsibility to stay in regular communication with your project supervisors. You will be assigned both a primary and secondary supervisor—make sure to utilize their help, support, and guidance throughout your project.

All learning material, guides and templates will be found on the VLE.

You are expected to work on this assignment on your own, and it is important that you do not discuss or exchange your ideas, data, or any work output with other students.

All submitted work is expected to observe academic standards in terms of referencing, academic writing, use of language etc. Failure to adhere to these instructions may result in your work being awarded a lower grade than it would otherwise deserve.

Your report should follow the academic writing style and must use IEEE referencing. In each section of the report, make sure to include sufficient details.

All submitted work is expected to observe academic standards in terms of referencing, academic writing, use of language etc. Failure to adhere to these instructions may result in your work being awarded a lower grade than it would otherwise deserve.

Students will get assistance to complete the tasks through the project supervisory meetings. Drafts will be reviewed, and formative feedback will be given in the tutorial sessions. So, you are much less likely to obtain a good grade if you don't attend the supervisory sessions. However, it is **student's responsibility** to plan and arrange the supervisory meetings around the supervisor's schedule and availability.

Support your work with relevant references from books, journals and other quality information resources using the **IEEE Referencing system**.

Support Arrangements:

Support will be provided via Moodle, lectures, and tutorial sessions. If students have any special requirements, they are advised to inform the lecturer.

For additional support see the [Learning Skills department](#). Here you can access Academic Skills Tutors, Digital Learning Facilitators, and Academic Support Librarians.

Academic integrity is an important part of your learning and assessment. On submission of an assignment, software called Turnitin is automatically used to check the similarity of your work to other sources of information and the work produced by other students. The similarity scores are reviewed by the marking team and any similarity scores that are a cause for concern will be flagged and investigated. By submitting this work, you confirm that you have read, understand and accept the university's regulations regarding academic integrity and academic misconduct such as plagiarism and collusion and agree to be subject to the academic integrity process if any such situation should arise.

This is an individual task; please ensure you take the time to thoroughly read this guide on academic integrity before submitting your assignment. [Academic Integrity a Brief Guide for Students](#).

Late submissions: work submitted up to a week late without a valid reason can only gain a maximum of 40%. If an extension is required, then a Request for Extension to Assignment Deadline Form must be completed and agreed prior to the submission date. Any work submitted more than a week late without a valid reason may be read but will not be marked.

Marking and moderation

All grades/marks are indicative and may change when moderated – see the last page for the marking criteria.

All required work must be submitted, in full and as directed and described, by the due time and date, to achieve marks reflecting its full worth. Work submitted after the due time and date, but within one calendar week, will be capped at 40%. Work more than a week late will not be marked and will be entered as 0%.

Wrexham University Skills Framework

Employability Skills Applied

On successful completion of this module, a student will have had opportunities to demonstrate achievement of the following Employability Skills:

Tick all that apply.

Adaptability & Flexibility (Managing Change, Coping with Ambiguity, Transferable Skills)	✓
Career Development (Career information, Access to opportunity, Career readiness)	✓
Critical Thinking (Problem Solving, Analytical Skills, Critical Thinking)	✓
Digital Capabilities (Digital Tools & Software, Data Analysis, Digital Citizenship)	✓
Enterprise and Entrepreneurship (Innovation, Commercial Awareness and Influencing)	✓
Interpersonal Skills (Communication, Emotional Intelligence, Networking, Bilingualism)	✓
Personal Skills (Initiative, Leadership, Social intelligence)	✓
Resilience (Positive Mindset, Self-Awareness, Motivation & Purpose)	✓
Social Impact and Sustainability (Social Responsibility, inclusivity, Cultural Awareness and application of the UN Sustainable development goals)	✓
Teamwork (Collaboration Skills, Active Listening, Planning & Organising)	✓

Assignment weighting

- Poster: 15%
- Artefact: 30% or 50%
- Report: 35% or 15%
- Supervisor's assessment: 5%
- Critical evaluation: 10%
- Demonstration: 5%
